Light Partials

Section 2

Set your phone's flashlight app to output the word "light" in morse code with a fairly slow blink speed. Once section 2 begins, the sequencer will automatically play through your 5-note sequence with a random duration of 7-11 seconds per note. As your flashlight is blinking, improvise with 7-10 gestures that each begin and end with silence (e.g. by starting and ending your movements from outside of the camera's view). Each gesture should take about 10 seconds and can take any form that you wish - letters or other shapes, fast or slow, smooth or erratic. This section should last about 1:00. Each member should move on to section 3 at their own pace.

Section 3

Set your phone's flashlight app back to a constant light. Once section 3 begins, you will only hear the fundamental frequency of the third pitch from your sequence. The node will move much more quickly and erratically. Chase the node around the frame with your light.
